

pLSC6 against 1,000 random six-gene signatures carrying the same coefficients. Panels B and C are independent corpora.

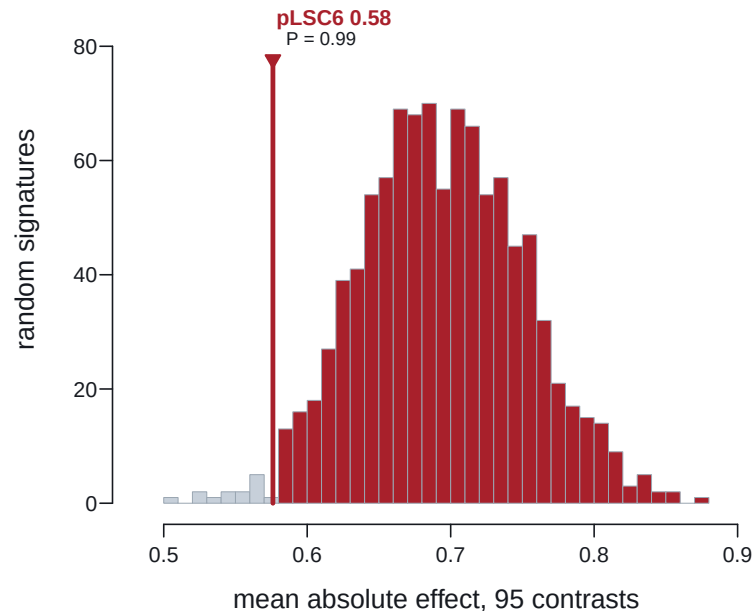

A Survival, 351 TARGET patients

31% of random signatures reach $P < 0.05$ here

B Drug response, array series

38 series, 41 agents: random sets do better

C Drug response, NCBI RNA-seq counts

38 further series, 74 agents: the same answer
